GLASS AND CERAMIC BAKING INSTRUCTIONS:

- Make sure the surface is thoroughly cleaned, using rubbing alcohol. Don't forget to remove all price stickers, otherwise they will burn when you bake;
- To not catch fire please make sure there are no attached things to the cup or glass of flammable materials;
- Once you are happy with your design let it air dry for 24 hours before baking. This will ensure proper adhesion of the design on the surface;
- After fully dry, place your project into a cold oven;
- Turn oven to 350 F (180 C);
- Set a timer for one hour;
- Once the hour is up, turn off the oven;
- Open the oven;
- Let the project cool down completely inside the oven.

Hand-washing in warm water is the best option to wash the surface. It is not recommended using a dishwasher or heavy-duty sponge.

Remember, there is always a chance to scratch the paint, be extra careful with the project.
